Tasks for the End of the OO Module

Continuing on the last assignment, redesign or replace the list structures hierarchy by any old or new one, such that

1. Both "Storage Class as the base-class (Banana-Monkey-Jungle)" and "Storage class instances as fields in the list classes (Contain-&-Delegate)" solutions are implemented in independent modules and module combinations
2. Any one of the two is easily chosen to be bundled into a library with API and documentation
3. Test them for the desired flexibilities by
 - Instantiating a queue of stacks of heterogeneous elements
 - Sorting this queue on the string formed by the top elements of each stack ending in the first zero byte ('\0' null character) down from the top.
